

# JetHead

Development, Inc.

## EMBEDDED SOFTWARE

JetHead develops software for embedded consumer electronic systems in C/C++, Java, Python and other languages.

## DEVICE DRIVERS

JetHead has experience creating LINUX based device drivers on all the top silicon platforms (Broadcom, INTEL, Marvell, Sigma, ST, Trident/NXP ... ) to meet the demanding needs of middleware vendors world-wide.

## TEST SYSTEMS

JetHead develops and maintains sophisticated automated test systems to speed development.

## TURNKEY SOLUTIONS

JetHead specialize in the creation and productization of embedded systems for the Consumer Electronics industry.

## The RVU Technology Leader

JetHead Development is a full-service embedded software engineering company with clients worldwide. JetHead offers numerous RVU, DLNA and DTCP software components under license, which are designed from the ground up for embedded systems and are therefore small, portable, and efficient. These components are used to create and test turn-key RVU Client and Server solutions. JetHead also offers software engineering services to quickly prototype and productize RVU solutions for Operators, CE manufacturer and Semiconductor companies.

## RVU Products

- **JetHead RVU client:** A fully optimized and RVU Alliance certified RVU client software for building embedded RVU clients in CE appliances.
- **JetHead RVU Server Framework:** Software upon which manufacturers can build embedded RVU servers.
- **JetHead RVU Test Server:** A LINUX PC based feature-rich customizable RVU server for testing RVU systems.
- **DTCP-IP:** Source and Sink implementations for securing the communication of content on home networks.
- **UPnP:** Small, efficient and portables software components developed from the ground up at JetHead.
- **Functional Modelling:** JetHead uses functional modelling to develop test systems to ensure quality.
- **Integration Services:** Getting to production on time.
